The Mayfield Clinic Spine Surgery Center

The Mayfield Clinic Spine Surgery Center, which opened in early 2007, is the first free-standing center in the region to provide physicians and patients with same-day surgical procedures for diseases and disorders of the spine. The center, distinguished by convenience, comfort, and amenities, is designed to accommodate ambulatory spine surgeries and pain management procedures performed by spine surgeons and other specialists.

The center features three operating rooms and a pain management suite. Mayfield's acclaimed spine surgeons perform procedures that do not require an overnight stay. Surgical procedures include single- and two-level lumbar laminectomies, single- and two-level anterior cervical discectomies and fusions, single-level spinal cord decompression, ulnar nerve surgery, carpal tunnel surgery, and minimally invasive spine surgery procedures.

Pain management procedures performed include epidural steroid injections and percutaneous stereotactic rhizotomy for facial pain.

"Technology is changing rapidly, allowing more and more patients to go home the same day they have spine surgery," said Michael Gilligan, President & CEO of the Mayfield Clinic. "We are now capable of performing many microsurgical procedures of the spine in only 30 to 60 minutes. Providing a safe, comfortable and convenient setting for such procedures is a tremendous benefit for our patients."

The Mayfield Spine Center is a 23,500-square-foot facility located on the five-acre Cornerstone at Norwood, developed by The Ackermann Group. Al. Neyer, Inc., designed the structure to maximize the site's unique shape, and GBBN Architects worked with Al. Neyer and the Mayfield team to design the interior.

The Mayfield Spine Surgery Center will accept patients by physician referral. For information, please call (513) 619-5899.
